Health Care Policy and Regulation

The demand for healthcare professionals trained in policy and regulation is on the rise. As the health care landscape becomes increasingly complex, the need for skilled professionals who are able to evaluate the impact of different programs and policies on the health of individuals and populations is critical. This certificate offers an understanding of how the law applies to the health care system while equipping you with the skills of organizing, managing and regulating the delivery of health care services.

The Health Care Administration certificate is an interdisciplinary program jointly delivered by UC’s College of Allied Health and the Lindner College of Business.
