Summary
This course provides an introduction as well as hands-on experience in data visualization. It introduces students to design principles for creating meaningful displays of quantitative and qualitative data to facilitate managerial decision-making.

Course Objectives
- Provide an overview and brief history of the practice of data visualization
- Introduce students to the key design principles and techniques for visualizing data
- Develop an understanding of the fundamentals of communication and alignment around concepts that are required for effective data presentation
- Provide an overview and develop an introductory level of competency on the use of several available software tools that can be used for data visualization
- Allow for project-based opportunities to identify, understand, analyze, prepare, and present effective visualizations on a variety of topics

Course Prerequisites
- General computer skills and a familiarity with charting tools like Microsoft Excel are necessary, along with access to the Internet for research and data gathering.
- Direct access to a computer on which the student can install software is highly recommended (see Required Software below)
- An understanding of basic charting and statistical terms and practices will be helpful, but not required.

Student Outcomes
After taking this course, students should be able to collect and process data, create an interactive visualization, and use it to demonstrate or provide insight into a problem, situation, or phenomenon.

Moreover, students should have the basic knowledge needed to critique various visualizations (good and bad), and to identify design principles that make good visualizations effective. Students should also have a basic understanding of some of the challenges present in making data understandable across a wide range of potential audiences.

Finally, students will have the opportunity to demonstrate their own skills in identifying a visualization that can be improved, completing their own design and/or analysis on the underlying data, and working to publish or promote acceptance of their presentation.

Course Format
Students will read class material, study best and worst practices, compare and contrast real-world examples, engage in problem solving, and participate in discussions related to the course material. Students will also practice applying the techniques and best practices discussed to real-world problems.

Required Software
A significant amount of time that students spend completing their assignments will involve the use of visualization software. Instruction will be focused and directed based on the capabilities/features of:

- Tableau Desktop Professional (TFT License), Student License or Tableau Public
- Microsoft Excel (Win 2007/Mac 2008 or Win 2010/Mac 2011 or Win 2013) - Optional
- R, R Studio and Shiny - Optional
Students will be able to learn the basic features of one or more of these through training videos that are posted in Blackboard, self-directed studies or by using available resources online. The instructor is also willing to help with specific questions or techniques as needed.

**Students may use any technology platform for their projects, as long as work is presentable for in class review, and accessible for review by the course instructor.** If there is any question about whether work can be accessed for review or presentation (e.g., if it is not created in one of the software tools listed above), you must check with the instructor prior to submitting your work.

Microsoft Windows and Excel can be purchased from the University Bookstore for a nominal charge if needed. A fully licensed version of Tableau Desktop is made available to each student for the duration of the class, or if preferred, the student may use the freely available Tableau Public software for non-proprietary and non-confidential data.

A full copy of Tableau Desktop is also available to full-time students for free for a year, available from Tableau. Microsoft Excel and Tableau Desktop Professional are available for both Apple Macintosh and Windows operating systems.

**Expectations of Students**
Students are expected to prepare and participate by:

1. Reading scheduled assignments each week
2. Participating in class discussions posted on Blackboard, projects, and quizzes
3. Completing the assigned homework projects by the due date
4. Participate in Group Projects

Students are expected to complete each test, exam, homework, and all other assignments independently. The student’s submissions must represent his or her individual work, and citations must be provided where content from other sources is referenced. Also, you may not re-use a data set from one project to another; you must start with a completely new data set each time.

Students will be assigned to groups for the purpose of completing specific assignments. It is important that you participate as necessary in the groups to complete assignments. Low participation in your group may affect your final grade for any group assignments.

**Academic Integrity**
If there is a question about the academic integrity of a submission, or if it is believed that a submission does not fully represent the unique work of the student or assigned group members, the instructors will take all appropriate action in accordance with the university policy on Academic Misconduct and Plagiarism (http://www.uc.edu/conduct/Academic_Integrity.html). This includes issuance of an “F” grade for the course. Group projects should be collaborative only within your group and not shared between groups.

As with all Lindner College of Business efforts, this course will uphold the highest ethical standards, critical to building character (the C in PACE). Ensuring your integrity is vital and your responsibility. LCB instructors are required to report ANY incident of academic misconduct (e.g., cheating, plagiarism) to the college review process, which could result in severe consequences, including potential dismissal from the college. For further information on Academic Misconduct or related university policies and procedures, please see the UC Code of Conduct (http://www.uc.edu/conduct/Code_of_Conduct.html).
Counseling Services, Clifton Campus
Students have access to counseling and mental health care through the University Health Services (UHS), which can provide both psychotherapy and psychiatric services. In addition, Counseling and Psychological Services (CAPS) can provide professional counseling upon request; students may receive five free counseling sessions through CAPS without insurance. Students are encouraged to seek assistance for anxiety, depression, trauma/assault, adjustment to college life, interpersonal/relational difficulty, sexuality, family conflict, grief and loss, disordered eating and body image, alcohol and substance abuse, anger management, identity development and issues related to diversity, concerns associated with sexual orientation and spirituality concerns, as well as any other issue of concerns. After hours, students may call UHS at 513-556-2564 or CAPS Cares at 513-556-0648. For urgent physician consultation after-hours students may call 513-584-7777. For information about services at Blue Ash or Clermont campus see Course Information in Blackboard.

Title IX
Title IX is a federal civil rights law that prohibits discrimination on the basis of your actual or perceived sex, gender, gender identity, gender expression, or sexual orientation. Title IX also covers sexual violence, dating or domestic violence, and stalking. If you disclose a Title IX issue to me, I am required forward that information to the Title IX Office. They will follow up with you about how the University can take steps to address the impact on you and the community and make you aware of your rights and resources. Their priority is to make sure you are safe and successful here. You are not required to talk with the Title IX Office. If you would like to make a report of sex or gender-based discrimination, harassment or violence, or if you would like to know more about your rights and resources on campus, you can consult the website www.uc.edu/titleix or contact the office at 556-3349.

Performance Evaluation
Course grades will be determined as follows:

<p>| | |</p>

</table>

Please see the Grading Rubric for grading criteria on assignments. Points for the Test will be awarded as marked on the exam.
All students have the same opportunity to earn points in the course. Any questions regarding grading must be addressed within one week of return of the graded assignment, quiz or exam to the student.

**Group Member Feedback and Grading**

For group projects, the instructor may allow for members to provide feedback on contributions and work effort of other group members. This feedback may be taken into account in issuing individualized grades for group projects. In other words, the input of your group members may positively or negatively affect your grade on these projects.

**Extra Credit Assignment**

Each student has an opportunity to earn extra credit by completing one additional assignment. The subject/topic and data set used must be approved by the instructor, and work on the extra credit assignment must be by **individual only** (no group extra credit assignments).

Students may select one of the two options below for their extra credit assignment. Please note that you must complete all requirements of the assignment to be eligible for full credit:

1) **Participate in Andy Kriebel’s Makeover Monday Project** ([http://www.makeovermonday.co.uk/](http://www.makeovermonday.co.uk/))
   a. Andy Kriebel’s makeover Monday dataset is published every Sunday. Use any Sunday dataset and create a makeover of the chart using the provided data.
   b. Publish your own blog post about your redesign or post to Tableau Public and/or Twitter

2) **Create an Infographic**
   a. Identify a dataset (for example, information about schools performance in Ohio, economic reports, government or corporate report, etc.) that would make a good infographic
   b. Redesign or create an infographic using the dataset you found
   c. Write a blog article explaining your graphic and what you believe to be the benefits of your approach
   d. Publish the article yourself on your own blog, or have your article published on an industry-related blog or site.

3) **Pick a topic from Dear-Data.com or Dear-Data-Two.com and create your own post card. You are welcome to mail it to someone you know, but please take a high resolution picture of both sides of the card to submit for your extra credit assignment.**

See Examples:
Dear-Data.com by Giorgia Lupi and Stefanie Posavec
Dear-Data-Two.com by Jeffrey Shaffer and Andy Kriebel
Exam

The test will cover the concepts and material in each of the first 3 classes. Students will be expected to apply the class readings and lectures in answering the test questions.

The test will be taken in class, online through Blackboard. Without prior approval, prior to the exam time, make-up opportunities are limited to documented emergencies. Instructor discretion is used in determining whether a situation constitutes an emergency.

Projects

Through a variety of projects, we will analyze best practices and compare and contrast with not-so-best practices. Students will learn to critique good and bad data visualizations and will be required to create and recreate various data visualizations using various sets of data. The final project will be interactive in nature and not simply a static chart. Points will be deducted for final projects that are not interactive.

Homework

Homework assignments will be given in this class and are due by the date and time indicated in the syllabus or as indicated by the instructor.

Submission of Homework and Project Deliverables

Students must submit all required assignments and supporting work via Blackboard. The submission time listed in Blackboard will be used to determine whether an assignment is on time or late. If multiple submissions are received, the final submission will be considered for grading (along with determining if the assignment was submitted on time). Submissions that are “in progress” or “draft” status in Blackboard at the designated due date and time will not be considered submitted. For group projects, the designated spokesperson is responsible for submitting all materials on behalf of the group.

Late Assignments

Late assignments will receive a deduction of 5% per day, beginning with a 5% deduction for assignments turned in past the date and time due. Assignments more than 3 days late will not be accepted.

Adjustments to Assignments, Schedule, and Syllabus

The scope, timing, and due date/time of any assignments, projects, homework, exams, or any other required work may be adjusted by the instructor as needed to maximize learning opportunities for students and/or better serve the goals of the course. The syllabus may likewise be modified at the discretion of the instructor.

Any adjustments will be communicated to students in class and on Blackboard with as much advance notice as possible.

<thead>
<tr>
<th>Criteria</th>
<th>10 – Outstanding</th>
<th>9 – Proficient</th>
<th>8 – Basic</th>
<th>7 (or lower) - Below Expectations</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>OBJECTIVE</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Completed assignment per requirements</td>
<td>All portions of the assignment, including presentations, data preparation, and visualizations were attempted and submitted. This is a pass / fail component. All or no points are awarded.</td>
<td>Data is related but not sufficient to support the analysis, or significant data issues prevent a clear reading of the results.</td>
<td>Data has little or no relation to the topic being explored, errors will lead to incorrect conclusion, and/or data issues make the analysis unusable.</td>
<td></td>
</tr>
<tr>
<td>Data is appropriate and sufficient for the analysis</td>
<td>The data set chosen or used by is appropriate, correct, and sufficient to support the thesis of the analysis.</td>
<td>Data is appropriate but minor data issues may be present or enhancements may be needed for a proper analysis.</td>
<td>The user must self-discover functionality. Headers and footers may be missing. Difficult to know what to do.</td>
<td></td>
</tr>
<tr>
<td>Headers, directions, citations, and visual cues are given as guides</td>
<td>Clear direction is provided. Visual cues, tooltips, and citations are consistently and correctly employed to present and guide.</td>
<td>The user must self-discover functionality. Headers and footers may be missing. Difficult to know what to do.</td>
<td>The user has little or no indication of how to engage. Directions are missing on clear. Missing headers and footers for context and meaning.</td>
<td></td>
</tr>
<tr>
<td><strong>SUBJECTIVE</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Basic visualization rules and best practices are consistently applied and demonstrated</td>
<td>Chart types are suitable and best options for the analysis. All axes and text are treated appropriately. The application of color is correct and clearly conveys meaning.</td>
<td>Charts incorrectly used for the purpose intended. Axes are difficult to read and detract from understanding. Color used in a distracting or unsuitable manner.</td>
<td>Difficult to understand what is intended with the chart and data. Color actively distracts and confuses. Chart junk dominates the visualization and the meaning is unreadable.</td>
<td></td>
</tr>
<tr>
<td>The visualization allows the user to conduct the intended analysis</td>
<td>The visualization facilitates quick cognition and leading to a fact-based conclusion or assertion.</td>
<td>The visualization does not directly address the topic or relies on presentation support.</td>
<td>The visualization is completely inappropriate and cannot be used to conduct the intended analysis.</td>
<td></td>
</tr>
<tr>
<td>Viz is clean, clear, concise, captivating (Shaffer 4 C’s)</td>
<td>The 4Cs are well represented; the visualization is clean, clear, concise, and captivating.</td>
<td>Aspects of the 4Cs are apparent; opportunity exists for further enhancement.</td>
<td>Multiple aspects of the 4Cs are missing, or have not been well addressed in the visualization.</td>
<td>Significant or complete disregard for the guidance present in the 4Cs, resulting in a poor visualization.</td>
</tr>
<tr>
<td>Attractiveness and attention to design and details of craft</td>
<td>Fonts choices are conscious and consistent, proper grammar and spelling is used, and choice of position, size, and emphasis integrate elements into a visually appealing and engaging whole.</td>
<td>Visualization shows thought and planning, and most aspects work in harmony. May exhibit minor issues with spelling, alignment, or sizing mismatched with importance.</td>
<td>Visualization appears sloppy and may be difficult to understand as a coherent whole. Multiple issues with spelling, font consistency, positioning, or other distracting characteristics.</td>
<td>Little or no apparent thought or given and visualization comes across as disorganized. May be visible through numerous spelling or grammar issues, poor alignment and positioning choices inappropriate font use, etc.</td>
</tr>
<tr>
<td>The visualization is usable and actionable (Duell Rules)</td>
<td>The visualization is targeted to the audience, the story is evident, and the conclusion or action required is clearly apparent. No additional interpretation is needed.</td>
<td>There is a clear message or story conveyed, but the action or conclusion that should be drawn is not definitive. May require interpretation.</td>
<td>The visualization suggests some possibilities, but does not lead to clarity of understanding and therefore action is not possible.</td>
<td>No apparent message or relevancy to the user; no actions can nor should be taken based on the analysis.</td>
</tr>
<tr>
<td>Quality, integrity, and impact of the findings and analysis</td>
<td>The analysis shows a level of quality, integrity, and competency that makes the viz impactful, generating a high level of trust.</td>
<td>The overall conclusions of the analysis seem to be sound, with support by anecdotes or additional evidence.</td>
<td>The analysis shows a trend or suggests a result, but is not trustworthy because of errors in process, omission, or scope.</td>
<td>The analysis appears to be poorly conducted, greatly compromising the integrity of some or all of the visualization.</td>
</tr>
<tr>
<td>Overall effectiveness of communication and presentation</td>
<td>The visualization (or presentation) is delivered in a convincing way that demonstrates confidence, competency, and thoroughness.</td>
<td>Delivery provides a strong argument and is well supported; minor details should be vetted and affirmed.</td>
<td>The presentation and communication leaves concerns or lingering lack of clarity. Work required to review and confirm.</td>
<td>The communication and presentation results in confusion and low level of confidence in the analysis, requiring a significant or complete re-do.</td>
