Lean systems thinking and tools have maximized customer value and minimized waste, while focusing on continuous improvement. Supply chains have fostered unprecedented integration and collaboration along with globalization and specialization. Logistics, spanning material flow aspects of transportation and warehousing, has seen sustained popularity. Despite the attention drawn to each of these areas, their effective combination into Lean Supply Chain Logistics still leaves many avenues for improvement.

Join us to learn the theory behind lean and to see firsthand how lean principles are applied to logistics and supply chain processes. This workshop will highlight the critical elements and “must know” concepts, and discuss the tools necessary to solve problems, eliminate waste, decrease inventory and lead time, improve processes, and ultimately decrease the total cost of fulfillment.

Experts, Mr. Robert Martichenko and Dr. Thomas Goldsby, will lead this discussion. Participants will experience Lean Supply Chain practices via tours of LeanCor’s operations & lean fulfillment centers.

SPEAKERS
Robert Martichenko, CEO, LeanCor Supply Chain Group

Thomas Goldsby, Ph.D., Fisher College of Business, The Ohio State University
